

Principles of Joint Integrity

Kevin Beaumont
PEG
Global Bolting specialist

21/4/2020

Mission

To optimize safety, quality and schedule in industrial bolting through innovative solutions, and an unyielding commitment to world class customer service.

- 50 years of bolting solutions across multiple industries globally
- Focused on providing value to the end user in both standard and unique applications
- Making everyday bolting safer
- Dedicated Representation in 100+ countries worldwide
- Global Bolting specialists (PEG) dedicated to work with you.

Safety Moment

USS Iwo Jima

- Correct Size
- Correct torque
- Passed leak test

Failed in Service with 10 fatalities !!

Productivity Enhancement Group

Pressure containment, Bolted joint

Gasket

Flange

Fastener

To obtain a leak free joint we must remain within the limitations of all components while taking into account operational and test conditions

Gasket

Spiral Wound Gasket

Non Asbestos
Fibre (NAF)

RTJ

Kammprofile

Gasket Boundaries

- Material compatibility (Physical and chemical properties)
 - Minimum seating stress during Assembly stage
 - Maximum allowable Gasket Stress
 - Gasket stress during operation and test stage

Productivity Enhancement Group

Flange

Welded neck flange

Slip on flange

Lap joint flange

Screwed flange

Blind flanges

Spectacle blind flange

Flange Boundaries

- Material Compatibility (Physical and chemical properties)
- Maximum allowable flange stress
- Flange stress during assembly or applied depending on tightening method
- Flange stress during operation (Pressure and Temperature)

Productivity Enhancement Group

Fastener (Bolt, Stud or Nut)

Fastener Boundaries

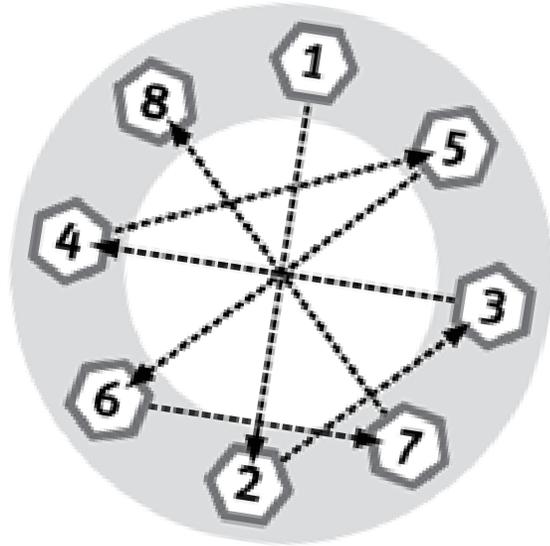

- Material Compatibility (Physical and chemical properties)
- Maximum allowable bolt/stud stress at assembly
- Fastener stress during operation (Pressure and Temperature)

Productivity Enhancement Group

Assembly and Tightening Process

Torque

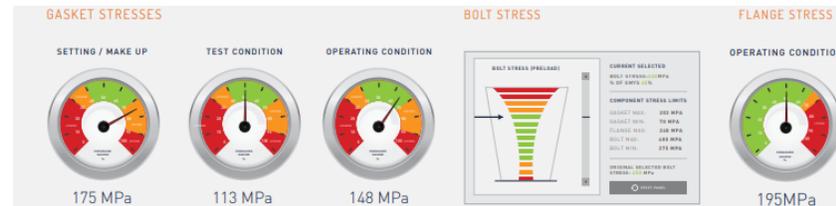

- 30% of required Torque
- 60% of required torque
- 100% of required torque

- Check pass in clockwise pattern at 100% torque value until no further nut movement

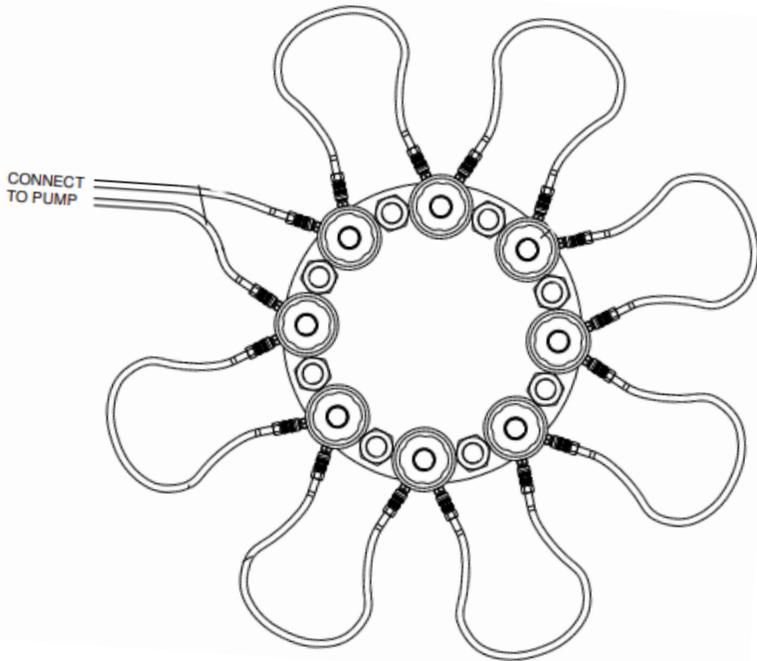

$$\text{Torque} = K \cdot D \cdot F$$

Assembly and Tightening Process

Tension

50% Cover Tension

TLLF – TOOL LOAD LOSS FACTOR

FLLF – FLANGE LOAD LOSS FACTOR

APPLIED LOAD = ASSEMBLY LOAD + TLLF + FLLF

- Apply tensioners to every other bolt (Odd numbers)
- Apply **pressure 1** which includes Applied load turn down nut with tommy bar and release, repeat twice assuring no nut movement can be achieved
- Move tensioners to remaining 50% of the bolts (even numbers) and apply **Pressure 2**, turn down nut with tommy bar and release, repeat twice assuring no nut movement can be achieved

Productivity Enhancement Group
